A CONSCIOUS DECISION TO TAKE ACTION.

At Atlas-Apex, this is our policy when it comes to the environment: From innovative on-site vacuum systems to the most modern solar installations, we are leading the roofing industry with new ideas and applications. Changes like these are the result of the conscious corporate decision to apply all the resources we can to research and development when it comes to the environment.

SOLAR.

Many companies today are choosing solar energy as a way to reduce their carbon footprint and create reliable, long-term energy savings. The solar industry is constantly changing and improving both the technology and its application. We help companies get the information they need to make smarter, sustainable decisions about solar energy.

All Atlas-Apex crews are qualified to install the latest in solar technology today. We've installed and executed some of the most complex solar systems in Canada.

VEGETATIVE ROOFING.

As more and more companies look for ways of incorporating green roofs into their businesses, we help firms all across Canada find solutions that work for their specific roofing systems.

Vegetative roofing applications provide a natural experience and reduce the impact of the roof on the environment. We have the resources to guide your company through the innovative ways you can incorporate vegetation into your roof, from simple turf applications to diverse vegetative systems.

LIGHTWEIGHT INSULATED CONCRETE.

Lightweight insulated concrete is the only tapered roofing insulation system that is sustainable and doesn't need replacing over the life-span of the roof. While providing high long-term insulation values, it offers much less impact on the environment than all previous materials. Its installation requires very specific skills. We at Atlas-Apex specialize in its installation and have done so for many years.
